

**Francisco Manuel Freire Cardoso Ferreira**

# **Digital Video Applied to Air Quality Monitoring**

Dissertação apresentada para obtenção do  
Grau de Doutor em Engenharia do Ambiente,  
Especialidade de Sistemas Naturais e Suas Tensões,  
pela Universidade Nova de Lisboa,  
Faculdade de Ciências e Tecnologia.

LISBOA

(1998)

# TABLE OF CONTENTS

DEDICATIONS.....	ii
ACKNOWLEDGEMENTS.....	iii
SUMÁRIO.....	iv
ABSTRACT.....	v
TABLE OF CONTENTS.....	vi
LIST OF TABLES.....	ix
LIST OF FIGURES.....	xi
1. INTRODUCTION.....	1
2. BACKGROUND.....	7
A. Air quality monitoring.....	7
1) Representativeness of air monitoring stations.....	9
2) Spatial analysis as a monitoring improvement tool.....	10
3) Spatial analysis combined with remote sensing.....	13
B. Statistical analysis of environmental data.....	14
1) Analysis of circular data.....	15
2) Principal component analysis (PCA).....	17
3) Analysis of variance (ANOVA).....	17
4) Correlation.....	18
5) Regression analysis.....	20
C. Remote sensing air monitoring techniques.....	21
1) Satellite and aerial photography.....	21
2) SODAR.....	22
3) Optical remote sensing.....	25
a) LIDAR.....	26
b) DIAL.....	29
c) DOAS.....	30
d) COSPEC.....	31
e) OPUV.....	31
f) Imaging System.....	31
g) FTIR.....	32
4) Effects of visibility in remote sensing.....	33

D. Videography.....	35
1) Image processing and cameras model.....	38
2) Image processing operations.....	39
E. Air pollution modeling.....	44
3. METHODS AND APPLICATION.....	52
A. Case-study.....	55
1) Power plant description.....	55
2) Environmental characteristics of the area.....	56
3) Air quality monitoring network.....	57
4) Air emission's monitoring.....	62
B. Methodology.....	64
1) Introduction.....	64
2) Data collection and processing.....	65
4. RESULTS AND DISCUSSION.....	69
A. Data analysis.....	69
1) Meteorological data.....	69
2) Air emission's data.....	83
3) Air quality data.....	85
a) Space-time analysis.....	90
b) Monitoring network response.....	92
B. Digital video analysis.....	107
1) Wind direction.....	109
2) Wind speed.....	118
3) Stack's outlet gases velocity.....	122
4) Effective height of the plume.....	124
5) Plume dispersion.....	133
6) Modeling enhancements.....	139
5. CONCLUSIONS AND FUTURE DEVELOPMENTS.....	144
6. REFERENCES.....	146
7. APPENDICES.....	153
A. Wind pollution roses for particulates, sulfur dioxide, and nitrogen oxides based on hourly concentration averages and hourly wind direction averages measured by the meteorological station of the power plant at 55 m of altitude. Data collected between September 29, 1994 and August 31, 1996 for different power plant production levels.....	154

B. Wind pollution roses for particulates, sulfur dioxide, and nitrogen oxides based on hourly concentration averages and hourly wind direction averages measured by Sodar at the power plant at 200 m of altitude. Data collected between September 29, 1994 and May 31, 1995 for different power plant production levels.....	167
C. Average vertical wind direction profiles based on Sodar data (30 min. averages) collected at the power plant from September 29, 1994 to May 31, 1995. ....	177
D. Wind direction evolution through different times of the day (one-hour periods) at different altitudes. ....	182
